

# ASIAN PERMEABLE PAVERS

Porous. Reliable. Versatile.

Asian Permeable Pavers are a type of paving material commonly used in landscaping and construction projects throughout Asia. These pavers are designed with permeability in mind, allowing water to infiltrate through the surface and into the ground below rather than running off into storm drains or causing erosion.

## WHERE TO BE USED:

Sidewalks | Walkways | Parks | Patios | Driveways | Housing Colonies | Service Roads | Dock Yards | Ports | Terminal Roads

## COLOUR RANGE:

## LOAD FACTOR:

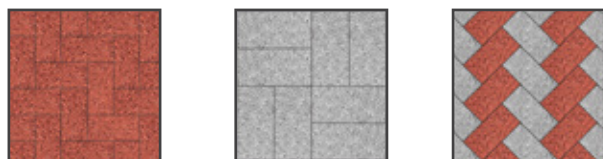

## SPECIFICATIONS

Dimensions (mm) (Length x Breadth x Thickness)	Compressive Strength (MPa)
L* x B* x 60	≥35
L* x B* x 80	≥40

\*\*Length and Breadth are customizable as per our current product portfolio.

## LAYING PATTERNS

## SPECIAL FEATURES

- **Interlocking Design:** Asian permeable pavers feature an interlocking design, these gaps facilitate water infiltration and promote drainage.
- **Paver Patterns:** Asian permeable pavers are designed to maximize surface permeability while maintaining structural integrity.
- **Surface Texture:** The surface texture of Asian permeable pavers helps to improve traction for pedestrians and vehicles while allowing water to flow freely.

## ADVANTAGES

- Cost-effective, less time-consuming
- Water Ground Recharge
